CogginHigh-ImpactResearch Recognition Program

UNF has a stated goal of significantly increasing witesall research standing. How this is done will vary across the university, but the best way for the Coggin Colleg Business to improve it esearch reputation is to increase the frequency twhich faculty publish in high mpact academic journals. The competition to get into the best academic business journafise is e, and the time and energy that one must invest into a toptier publication is significant. The purpose of the Coggin High mpact Research Recognition Program (CHIRRP) is to incentivate ufty to make that investment his program is being funded from the Coggin Dean's Distinguished Professorship account from state appropriations, faculty professional development funds, or other sources.

Under the CHIRRP, any Coggin Collegettjamember who gets a paper accepted in a himppactjournal (defined below)will be allowed to select one of three recognition grants: a course release to be taken during a fall or spring term, a \$5,000 spending account, or \$5,\$00 summer research grant. A few key points about the program:

- x There is no limit to the number dfmes a faculty member may receive one of these CHIRRP grants.
- x Faculty members may "bank" course release accrue enough to create a semester with no teaching responsibilities.
- x There is no timelimit on spending account funds. They can be saved across academic year The Dean's office will maintain the official balance and will track expenditures that state/university purchasing and travel rules will still apply.
- x Coauthored papers will

business journals that clearly would be appropriate to be included that do not appear on the ABDC listfor example, something like *Naturor* the *Journal of the American Statistical Association*.) For journals that fall into the secategories, the program will use a prapproval processo eliminate uncertainty.

Before submitting a paper to a journal the faculty member wishes to be eligible for the program, the faculty member submit a short writen review of the journal to their department chairthat makes the case for why the journal should be considered ight impact journal, despite it not being on the ABDC "A*" lishe department chair will in turn bring the request to the College Executive Committee, which will review the request and determine whether to include the journal in the program. Typically, these journals have one or more of the attributed is sted below.

- o An impact factor that is consistent with high pact journals in that field.
- o Appearingon another reputable external list as a "toper" journal (like those that are used on Harzing.com, the Financial Times, the UT Dallas list, etc.)
- o Clear externatevidence that it is one of the "best" journals in the relevant discipline
- Other external evidence that the journal is similar to those that are part of the program.

There will be a running list available to all faculty membersall journals that have been approved and are eligible for CHIRROnce a journal has been proved for the program, any faculty member may submit to that journal without having to go through the approval process In the very rare case where the circumstances of a journal change such that it is no longer appropriate to be included, the Collective Committee will infortine faculty of this (and papers already submitted to that journal would continue to be treated as appearing in a highimpact journal.)

- x Generally, journals that are rated as B or C on the ABDC list will not be eligibles for program.
- x Theproce \$\$ above envisions that faculty tnil-2.9 (t)b(fac)-1.9 (r1 (o)-6.7 (.2 (n n)13.1 (2 (le)-o)-k)-1.
